Hip #13

Free Drop Floyd

Hip #13 has had his upper airway examined via endoscopy. He has normal arytenoid anatomy and function and a normal epiglottis with intermittent displacement of his soft palate. He has a Grade 2/4 lymphoid follicular hyperplasia (blisters) which is consistent with his age. In my opinion, he has a Grade A- upper airway.

Sincerely,

A handwritten signature in cursive script that reads "Stephanie White".

Stephanie White, DVM
