Hip #32

Chestnut Gelding

Hip #32 has had his upper airway examined via endoscopy. He has bilateral chondritis with small, focal ulcerations on both arytenoids. Arytenoid function is normal, and the epiglottis is normal. He has a Grade 2/4 lymphoid follicular hyperplasia (blisters) which is consistent with his age. In my opinion, he has a Grade B- upper airway.

Sincerely,

Stephanie White, DVM
